

# Truly focused collaboration

Barco's interactive collaboration platform for meeting & training rooms

# The floor is yours... completely!

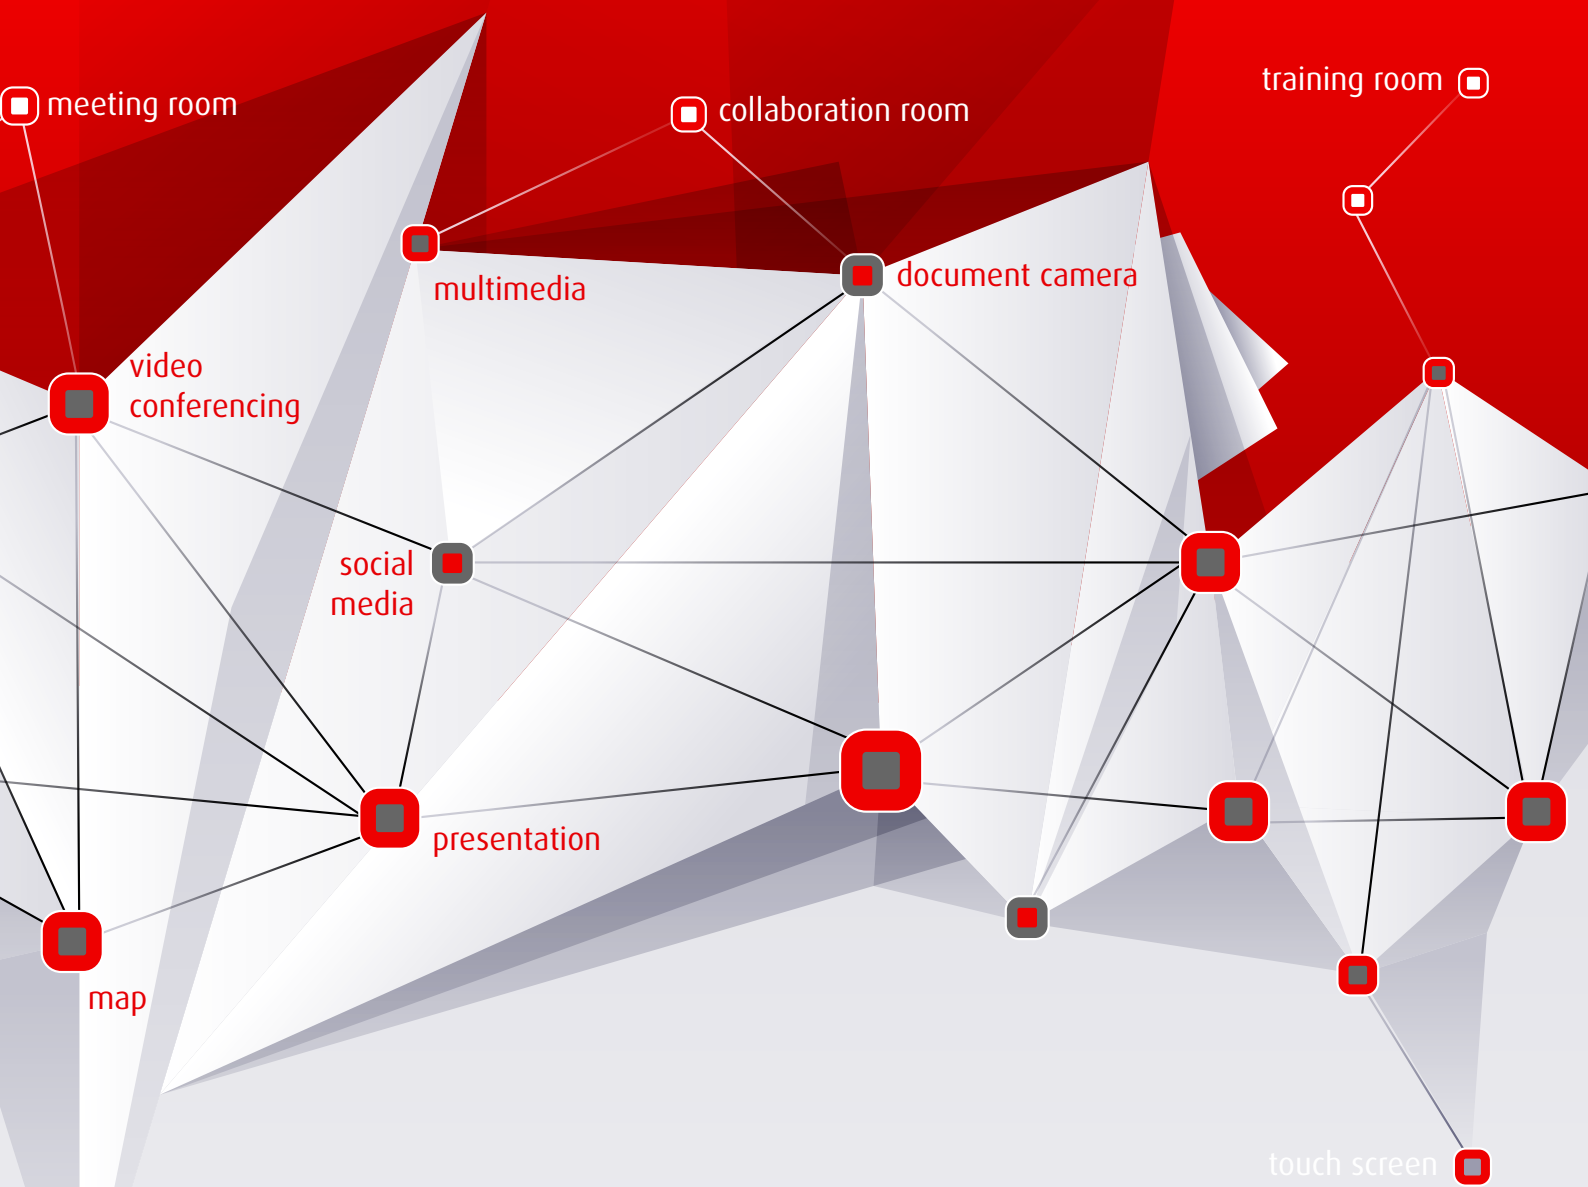

The point of meeting is working together. Collaborating. Whether the meeting's objective is providing information or discussing a plan, it's always the same recipe with similar ingredients: a group of people, one or more topics, and some audiovisual content to share.

In the past, there was usually one person bringing the content to present or discuss – on paper, as a PowerPoint presentation, or in another medium. But the introduction of mobile devices (laptops, tablets and smartphones) that people always carry with them, means that now every meeting participant has his/her own content available all the time.

With its **interactive collaboration platform for meeting and training rooms**, Barco introduces the most powerful and flexible meeting technology available. The platform enables users to connect any digital device, wired or wireless, to the central meeting room screen. Then, in a straightforward, user-friendly way, the participants can offer their content to the moderator, who decides what is shown onscreen.

In training rooms, it supports the evolution from a teacher-centered to a student-centered approach, by facilitating interaction and information exchange.

### Solution highlights

- Drives **2 UHD (4k) displays or projectors**
- Connect **any digital source** to the central meeting room display
- Up to **8 HD sources** can be connected and shown simultaneously
- An intuitive **touch-screen enabled user interface** controls all of the visuals
- The **moderation** function lets the moderator decide what is shown on the screen
- The **auto-layout** feature makes it easy to select the content that needs attention
- Built as a modular system, this solution is completely **future-proof**

# Always on-topic

Barco's interactive collaboration platform for meeting and training rooms, was designed to streamline all meeting visualization needs. Not only does it provide the easiest way to get the participants' content on the central screen, it also offers a number of unique tools that help everyone focus on the key meeting topics - avoiding having the meeting hijacked by a subtopic. The result: shorter and more to-the-point meetings.

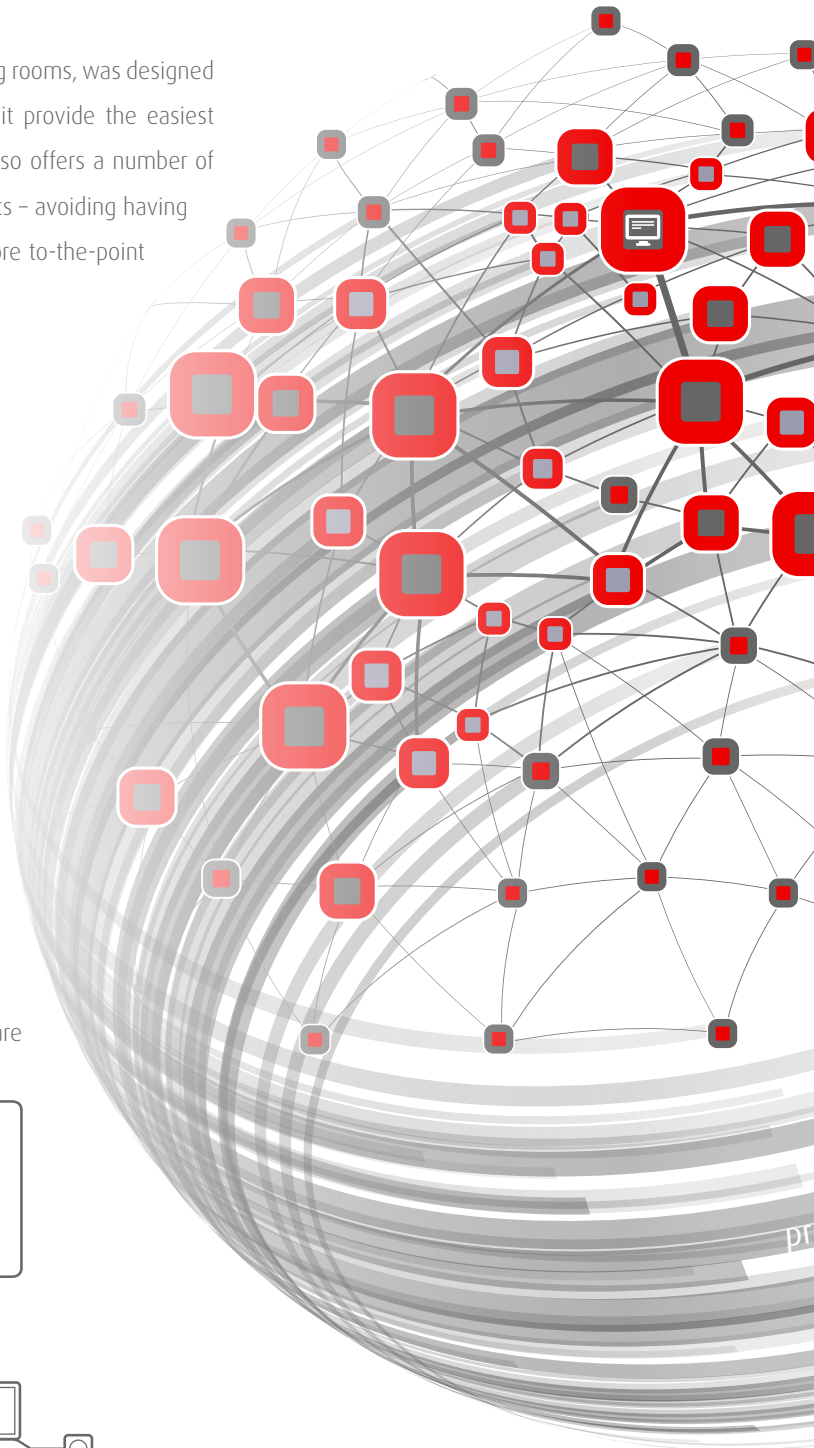

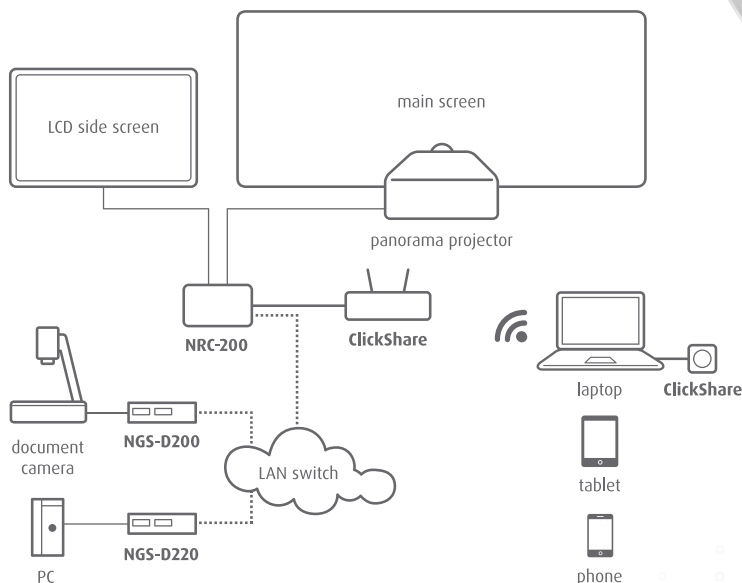

## Moderation - total control of the meeting's flow

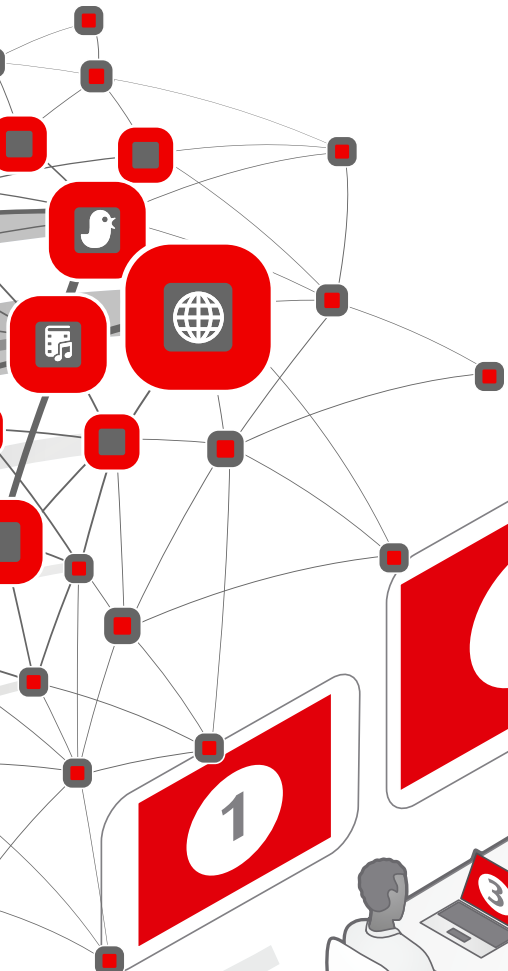

The heart of Barco's collaboration solution for meeting and training rooms is the touch-enabled user interface that controls the central screen. All available sources are visible on this display - and the moderator, meeting chairperson or teacher, simply selects the ones that should be visible to everybody.

## Auto-layout - highlight the real focus

In standard operation, all source windows are shown in the same size on the central screen. But sometimes it's necessary to highlight a certain source by making it larger than the others (which remain onscreen as well). This is easy to do with Barco's interactive collaboration platform for meeting and training rooms: on the touch interface, you can choose from a number of automatically suggested alternative layouts.

What's more, both screens driven by the collaboration solution are controlled from the same touch-screen.

# A modular solution

Barco's interactive collaboration platform for meeting and training rooms consists of a number of components that deliver the user experience that best suits your needs. This modular approach means that the system can be expanded or upgraded at any time, making the solution fully future-proof. The only required components are the NRC-200 and the touch-screen interface – the rest is entirely up to you.

## NRC-200

If the touch-screen interface is the heart of the solution, the NRC-200 is the brain. This networked room compositor performs all necessary calculations and drives both output screens. Its shape enables mounting in a 19" rack.

## ClickShare

Barco's unique presentation and collaboration system – ClickShare – is ideal for connecting any wireless source to the total solution. Whether you are using a laptop, a tablet or a smartphone, you can share your device's display on the central meeting room screen with just the click of a button.

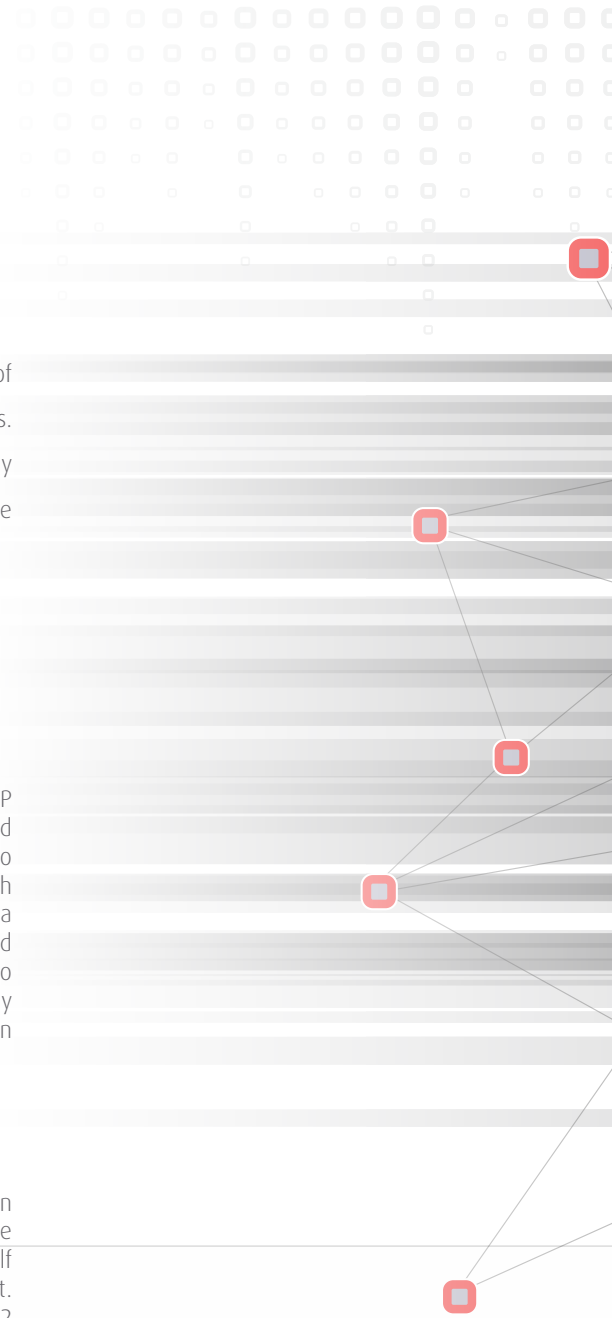

ClickShare can be used as a stand-alone system, but it also connects seamlessly with Barco's interactive collaboration platform for meeting and training rooms. Every available content source is shown individually in the user interface, and the moderator can select which source(s) to display on the central screen. So, there's no guarantee that your source will appear immediately when you push the button – the choice is always up to the moderator.

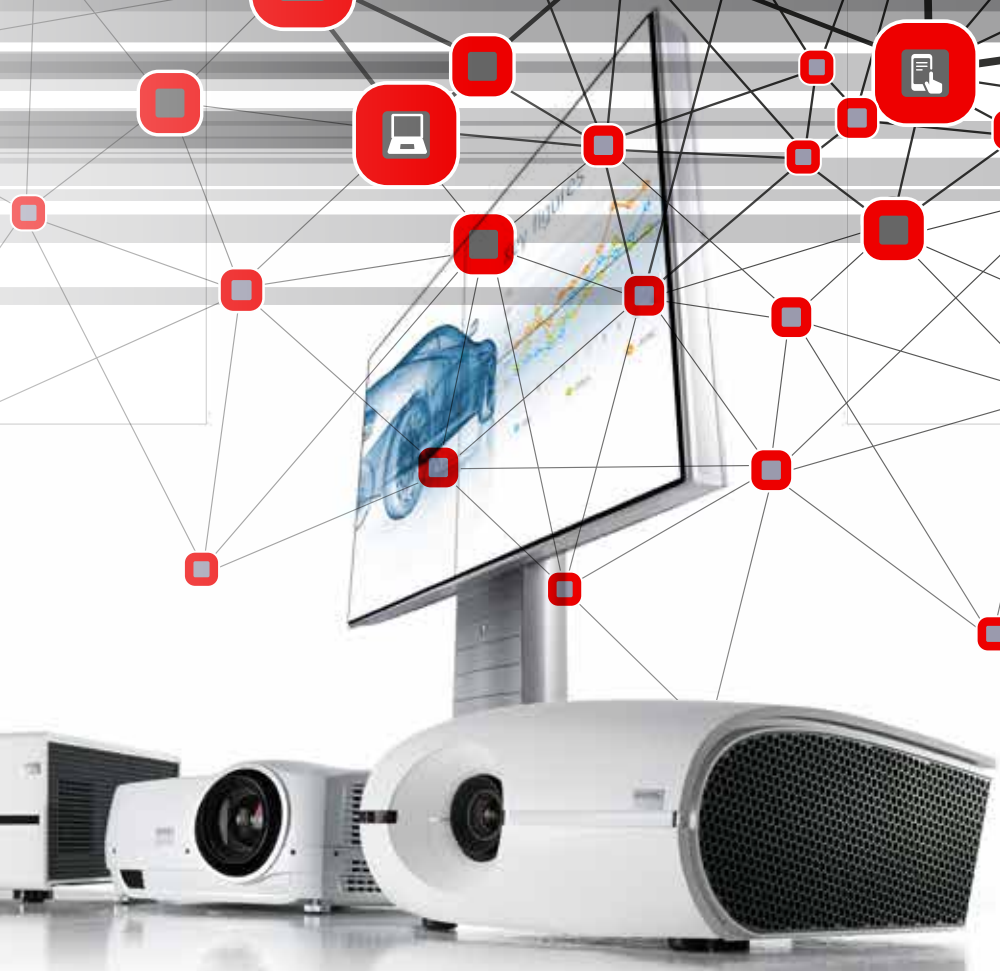

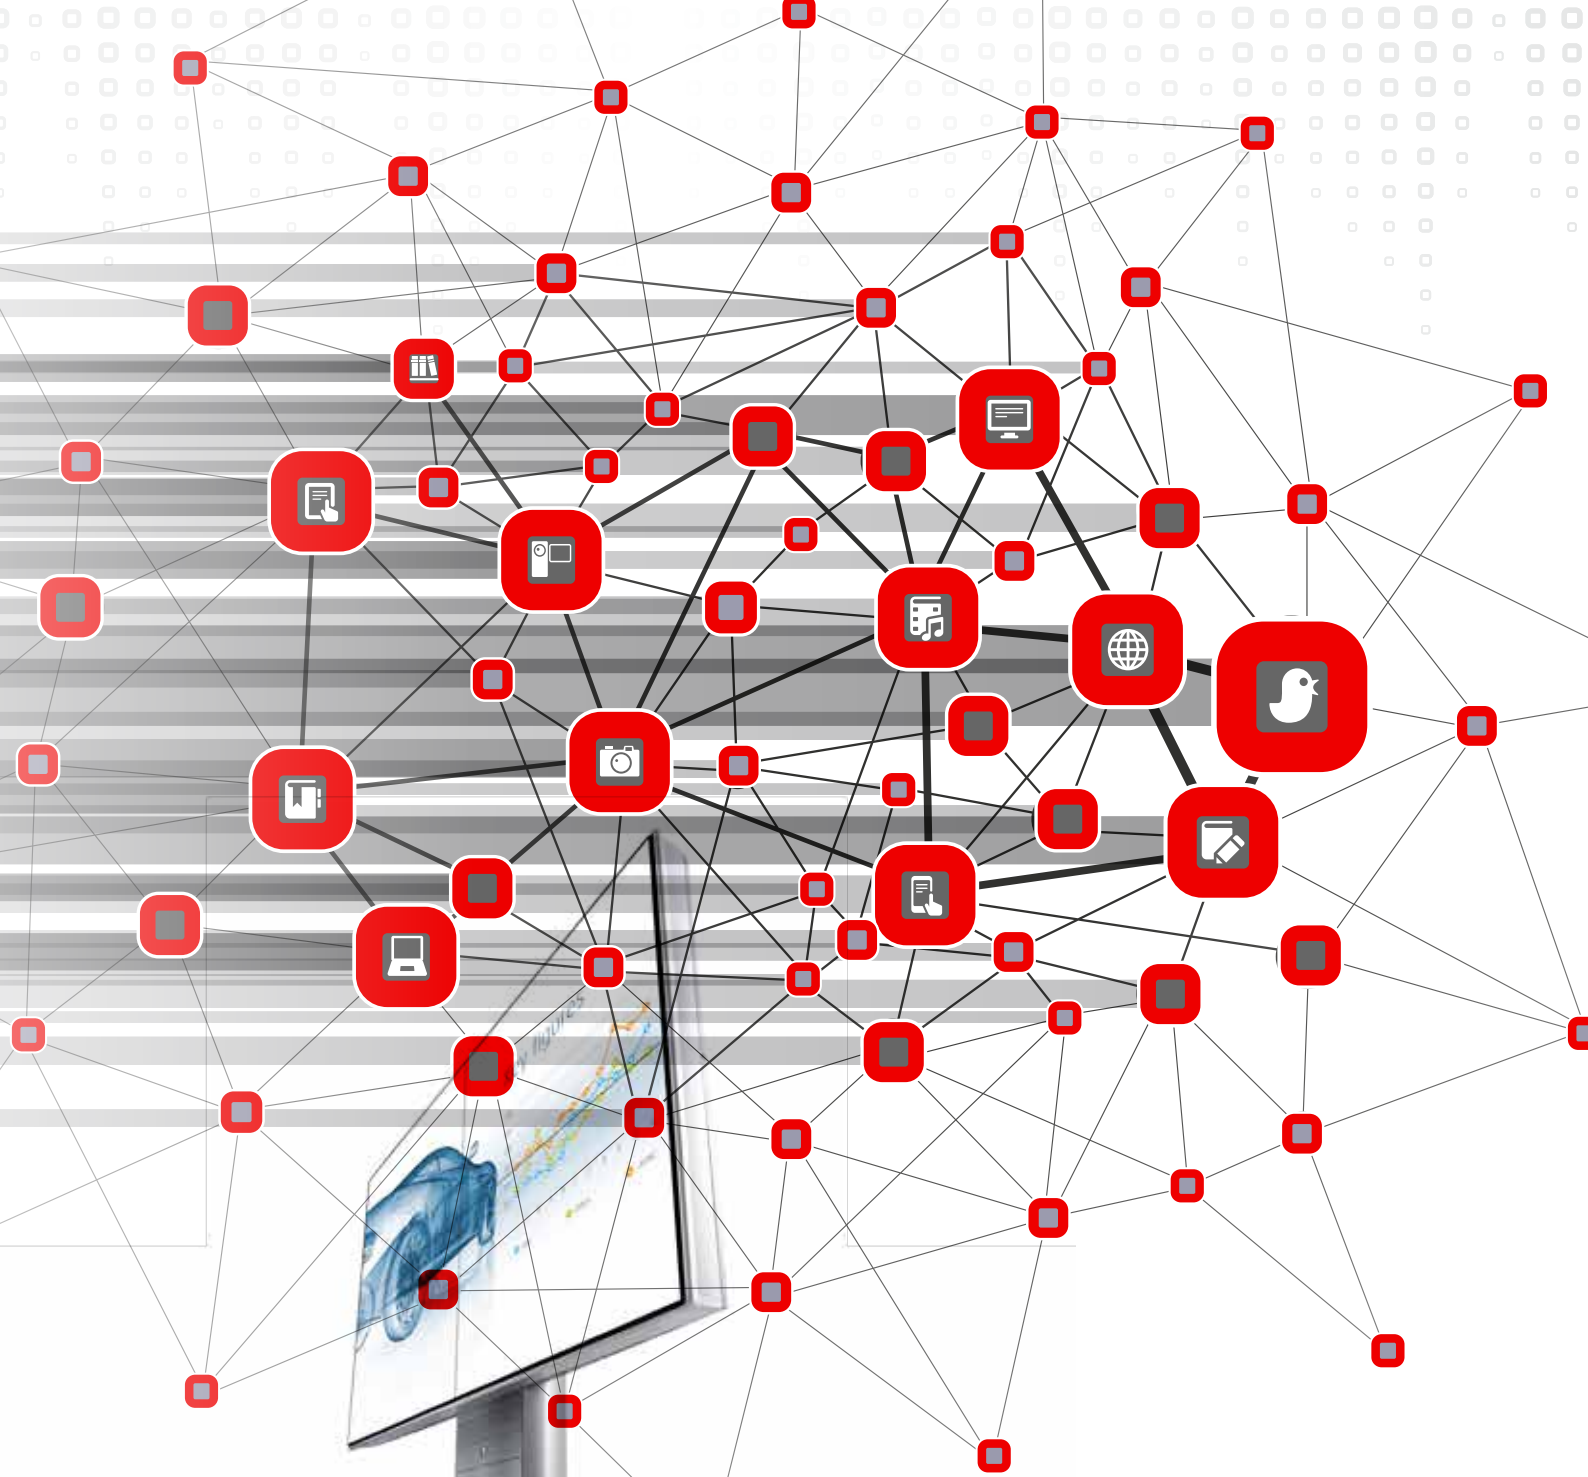

## Digital encoders

Networked content – coming from an IP camera, for example – can be connected directly to the NRC-200. In order to connect non-networked sources, such as document cameras, you need a digital encoder. Barco's NGS-D200 and NGS-D220 were designed specifically to this end, allowing you to benefit fully from Barco's interactive collaboration platform.

## Touch user interface

The moderator controls the content on the central screens with an easy-to-use interface on a commercial off-the-shelf touch-enabled all-in-one PC or tablet. This user interface controls up to 2 screens, and allows the moderator to select the sources and the layout.

**Projectors and LCD displays**

For your visual collaboration solution to really stand out, you need quality visualization equipment. In Barco's extensive portfolio of business projectors and LCD displays, you will without a doubt find the products that seamlessly suit the needs of your meeting or training room. They will perfectly match your interactive collaboration platform, which can drive up to 2 screens of UHD resolution.
